

Algebraic Number Theory

Dietrich Burde

Lecture Notes 2021

Contents

Chapter 1. Introduction	1
Chapter 2. Integral ring extensions	5
2.1. Global fields and integral closure	5
2.2. Rings of integers	11
2.3. Krull dimension	14
2.4. Norm and trace	15
Chapter 3. Ideals of Dedekind rings	25
3.1. Fractional ideals	25
3.2. Unique factorization of ideals	26
3.3. Ideal norm	33
Chapter 4. Finiteness of the class number	37
4.1. Minkowski theory	37
4.2. Rings of integers as lattices	44
4.3. Class number 1	52
Chapter 5. Dirichlet's unit theorem	59
5.1. The group of units	59
5.2. Analytic class number formula	65
Chapter 6. Splitting and ramification	69
6.1. Localization	70
6.2. Degree theorem	71
6.3. Decompositions in Galois extensions	76
6.4. Ramification and discriminant	80
Chapter 7. Cyclotomic fields	83
7.1. Roots of unity	83
7.2. The ring of integers of a cyclotomic field	84
7.3. Fermat's equation	88
Chapter 8. Valuations and local fields	93
8.1. Valuations	93

8.2.	Ostrowski's theorem	96
8.3.	Discrete valuations	99
8.4.	Completions	101
8.5.	Local fields	105
8.6.	Failure of the Hasse Principle	109
Chapter 9.	The Theorem of Kronecker-Weber	113
9.1.	Preparations	113
9.2.	Reduction to the local version	115
9.3.	Proof of the local version	117
	Bibliography	123
