

# Contents

<b>Series Preface</b> .....	vii
<b>Preface</b> .....	ix
<b>I Elementary Population Genetics</b> .....	1
1. Introduction .....	1
2. The Hardy–Weinberg Law .....	5
3. Correlation Between Relatives and Components of Variance .....	9
4. Nonrandom Mating .....	15
5. Random Genetic Drift .....	18
6. Mutation .....	20
7. Recombination .....	21
8. Population Growth .....	24
9. Selection at a Single Locus .....	29
10. The Continuous-Time Selection Model .....	38
<b>II Selection at Two or More Loci</b> .....	45
1. Two-Locus Two-Allele Models .....	46
2. The Multilocus Model .....	54
3. Components of Genetic Variance and Covariance .....	58
4. Marginal Systems and Equilibrium Properties .....	69
5. Evolution in the Absence of Epistasis .....	74
6. Evolution in Multilocus Systems .....	80
<b>III Classical Mutation-Selection Models</b> .....	95
1. Dynamics in Haploid Populations .....	96
2. Dynamics in Diploid Populations .....	99
3. Equilibrium Mean Fitness and Genetic Loads .....	105
4. The Stepwise-Mutation Model .....	112
<b>IV Mutation-Selection Models for Quantitative Traits</b> .....	117
1. The Continuum-of-Alleles Model .....	118
2. The General Model and Its Basic Properties .....	123
*3. A Rigorous Mathematical Treatment .....	131
*4. A Model in Terms of Probability Measures .....	136
5. Equilibrium Mean Fitness and Mutation Load .....	143

<b>V</b>	<b>Dynamical Equations for Quantitative Traits under Selection .</b>	155
	1. Preliminaries . . . . .	157
	2. Populations in Linkage Equilibrium . . . . .	160
	*3. Selection Response and Linkage Disequilibrium . . . . .	166
	*4. Recombination and Selection . . . . .	178
	5. Mutation . . . . .	189
	6. The Dynamics of Phenotypes . . . . .	191
	7. Summary . . . . .	197
<b>VI</b>	<b>Stabilizing Selection and Genetic Variation in Large Populations</b>	199
	1. Analyses for a Single Locus . . . . .	200
	2. Two-Locus Models of Stabilizing Selection . . . . .	203
	3. Multilocus Models of Stabilizing Selection . . . . .	216
	4. Mutation-Selection Balance: Two Linked Diallelic Loci . . . . .	225
	5. Mutation-Selection Balance: Multiple Unlinked Diallelic Loci . . . . .	229
	6. Mutation-Selection Balance: The Haploid Continuum-of-Alleles Model . . . . .	232
	7. Polygenic Traits under Mutation-Selection Balance . . . . .	245
	8. Summary and Conclusions . . . . .	254
<b>VII</b>	<b>Quantitative Variation and Selection . . . . .</b>	257
	1. A Review of Experimental Data and Results . . . . .	258
	2. A Single Trait under Mutation and Stabilizing Selection . . . . .	268
	3. Other Models of Direct Selection . . . . .	282
	4. Multivariate Stabilizing Selection and Pleiotropy . . . . .	290
	5. Deleterious Mutations and Evolution . . . . .	298
	6. Apparent Stabilizing Selection and Pleiotropy . . . . .	308
	7. Directional Selection . . . . .	317
	8. Conclusions . . . . .	342
<b>VIII</b>	<b>Appendix . . . . .</b>	345
	A Stability in Dynamical Systems . . . . .	345
	B Perron–Frobenius Theory of Nonnegative Matrices . . . . .	352
	C Spectral Theory of Nonnegative Integral Operators . . . . .	354
	D Multivariate Moments and Cumulants . . . . .	357
	E Miscellaneous Results for Finite Populations . . . . .	362
	<b>References . . . . .</b>	369
	<b>Notation Index . . . . .</b>	389
	<b>Author Index . . . . .</b>	395
	<b>Subject Index . . . . .</b>	399
