Climate Justice and Collective Action

Angela Kallhoff

Series: Routledge Studies in Climate Justice

This book develops a theory of climate cooperation designed for concerted action, which emphasises the role and function of collectives in achieving shared climate goals. In debates on climate change action, research focuses on three major goals: on mitigation, on adaptation and on transformation. Kallhoff provides an analysis of why concerted action on the goals has been difficult to realize and develops a theory of climate cooperation designed to overcome the existing roadblocks. This book will be of great interest to students and scholars of climate action, climate justice, environmental sociology and environmental philosophy and ethics more broadly.

Reviews

"...This is a "must read" for anyone interested in the politics and ethics of the Anthropocene." **Dale Jamieson, NYU Law School and College of Arts and Sciences, USA**

"[This] book offers a rigorous overview of weaknesses in current collective action programs aimed at addressing climate change, proposing, as an alternative, a joint, goal-oriented approach that builds positively on the cooperative spirit of local, as much as global communities. A must read for those passionate about these issues." **Tracey Skillington, University College Cork, Ireland**

"...An important resource for thinking about climate change and collective action. Indeed, just the kind of serious but engaged scholarship we urgently need." **Stephen Gardiner, University of Washington, Seattle, USA**
