

Advanced e-Learning and e-Testing in Pharmaceutical Biology

Johannes Saukel
Dep. of Pharmacognosy

Why eLearning?

- The directors of the studies programme suggested to test the e-Learning environment
 - Administrative reasons
 - Didactic reasons

Administrative reasons

- Increasing number of new students

**Maximum: 120 workstations
for our students/year**

Blackboard - Plattform

Kurstools

- Kursinhalt
- Kalender
- E-Mail
- Bekanntmachungen
- Foren
- Chat
- Tests (H)
- Aufgaben (H)
- Lernmodule (H)
- Medienbibliothek (H)

What types of training/testing tools are available

- Accordances
- True/False Statements
- Missing Terms
- Multiple Choice Questions
- Most questions are supported by photographs

Aims

- Enhance the knowledge base of learners
 - optical comprehension
 - technical terms
 - architecture of different organisms
 - basics in organic chemistry and physics
 - recognition of numerous organisms
 - principles of taxonomy
- Enhance cross-linked thinking
 - realise cross-linking of facts
- Boost the competences in the field of Pharmaceutical Biology
-

Multiple Choice Question

1

2

3

4

- A. die 4 Arten sind alle dicotyl
- B. die 4 Arten sind alle einjährig
- C. 1, 2 und 3 sind annuell, 4 ist bien
- D. die 4 Arten sind alle monocotyl
- E. die 4 Arten sind alle zweijährig

- 1. A, C
- 2. C, D
- 3. A, B
- 4. D, E

Note

Schließen

Answer slide

- A. die 4 Arten sind alle dicotyl
- B. die 4 Arten sind alle einjährig
- C. 1, 2 und 3 sind annuell, 4 ist bien
- D. die 4 Arten sind alle monocotyl
- E. die 4 Arten sind alle zweijährig

1

2

3

4

Studentenantwort	Wert	Richtige Antwort	Feedback
<input checked="" type="checkbox"/> 1. A, C	100%	<input checked="" type="checkbox"/>	
2. C, D	0%		
3. A, B	0%		
4. D, E	0%		
Ergebnis:	100%		

Welche Nummern gehören zu welcher systematischen Einheit?

Accordance

Übereinstimmende Paare

1	- Auswahl treffen -
2	- Auswahl treffen - monokotyl
3	dikotyl
4	Farn
5	Pilz
6	Moos
5	- Auswahl treffen -
6	- Auswahl treffen -

Frage für: Pflanzengruppenzuordnung 1

Welche Nummern gehören zu welcher systematischen Einheit?

Fragestellung	Antwort	Wert	Richtige Übereinstimmung
	dikotyl	16.66%	dikotyl
	monokotyl	16.66%	monokotyl
	dikotyl	16.66%	dikotyl
	dikotyl	16.66%	dikotyl
	monokotyl	16.66%	monokotyl
	dikotyl	16.7%	dikotyl
Ergebnis		100.0%	

Ergebnis: 1) Euphorbia - dicotyl; 2) Orchidaceae - monocotyl; 3) Centaurea - dicotyl; 4) Salvia - dicotyl; 5) Poaceae - monocotyl; 6) Aster - dicotyl

True/False Statements

2-Seitenwechsel bei Phospholipiden in Membran

Innerhalb von Biomembranen können Phospholipide um die eigene Achse rotieren oder seitliche Bewegungen ausführen. Auch ein 2-Seitenwechsel ist leicht möglich.

Wahr Falsch

Easy to use tools for learning and collaboration online.

PERSONAL WORK

Personal Learning Environment (PLE)

-  **Today portal:** Latest info from rooms in Fronter and external RSS feeds.
-  **E-mail client:** Complete e-mail client with support for POP3 and IMAP.
-  **My contacts:** List of personal contacts and friends.
-  **My calendar:** Organise personal appointments and meetings.
-  **My resources:** Network-based hard drive for personal files and content.
-  **My portfolio:** Personal portfolio and display folder.
-  **Frontier Instant Messenger (FIM):** Internal instant messaging system.
-  **Blog client:** Edit your external blogs from directly within Fronter.
-  **Meeting:** Personal real-time meeting tool for 3 users. Features incl. video, app. sharing, whiteboard etc.
-  **Stickers:** Internal messaging system in Fronter.
-  **My homepage:** Personal web page.
-  **My public resources:** Share a selection of your personal documents.
-  **Information central:** Quick overview of new elements on Today portal.
-  **To-do list:** Personal task list with progress indication.
-  **RSS reader:** Display RSS feeds from external sources on the Today portal.
-  **My RSS feed:** Personal RSS feed from your Today portal.

LEARNING

Learning Management System (LMS)

-  **Hand-in:** Folder for submission of assignments and evaluation.
-  **Test:** Tool for test creation with options for format and design.
-  **Learning path:** Structuring of learning pages to facilitate directed learning.
-  **Individual Learning Plan (ILP):** Individual assessment of progress.
-  **Question database:** Shared database for test questions.
-  **Course import:** Import of IMS, SCORM and AICC courses.
-  **Statistics:** Complete report of activity in a room.
-  **Learning goals:** Import and customisation of learning goals for goal-oriented work.
-  **Portfolio:** Overview of learning process and work progress.
-  **Result matrix:** Summary of user results.
-  **Notes:** Short notes linked to learning objects.
-  **Whiteboard:** Real-time whiteboard tool.
-  **Video:** Show video clips and other multimedia files from the resources.
-  **External repository search:** Search in predefined external repositories.
-  **Parental Log-in:** Unique access to your child's portfolio.

- Time for reflection!

Developed Organisms composed of?

Which association has a greenhorn in biology with this images and the written headline?

It depends on the individual knowledge base!

eLearning - Theoretical Background

- Anchored Instruction (1990)
- Instructional Transaction Theory (1999)
- Cognitive Apprenticeship (1989)
- 4C/ID Theory (2002)
- Cognitive Load Theory (1991)

Anchored Instruction

J.D. Bransford (1990)

- **Anchored instruction**
 - requires putting the students in the context of a problem-based story.
- The students "**play**" an authentic role while
 - investigating the problem,
 - identifying gaps to their knowledge,
 - researching the information needed to solve the problem
 - developing solutions.
- For example, the students should play the role of an amoeba to learn about the needs of this organism.
- The teacher facilitates and coaches the students through the process.
- **Is not easy practicable in big auditorium!**

Instructional Transaction Theory

M. David Merrill (1999)

- What **to teach** and how **to teach**.
- **What to teach** has two considerations
- **Selection**
- **Representation**.
 - what are the knowledge components required for a given type of instruction? And how should these knowledge components be represented to facilitate instructional design?
- **How to teach** specifies the way that these knowledge components are **presented** to the student in order to **engage** the student in an **interaction** which is **appropriate** for **promoting** the acquisition of knowledge or skill

Instructional Transaction Theory

M. David Merrill (1999)

- **Component Transactions**
 - **IDENTIFY** name and remember information about parts of an entity
 - **EXECUTE** remember and do steps in an activity
 - **INTERPRET** remember events and predict causes in a process (e.g. natural law)
- **Abstraction Transactions**
 - **JUDGE** order instances
 - **CLASSIFY** sort instances
 - **GENERALIZE** group instances
 - **DECIDE** select among alternatives
 - **TRANSFER** apply steps or events to a new situation

Instructional Transaction Theory

M. David Merrill

- **Association Transactions**

- **PROPAGATE** acquire one set of skills in the context of another set of skills
- **ANALOGIZE** acquire steps of an activity or events of a process by likening to a different activity or process
- **SUBSTITUTE** extend one activity to learn another activity
- **DESIGN** invent a new activity
- **DISCOVER** discover a new process

Cognitive Apprenticeship

J. S. Brown, A. Collins, P. Duguid (since 1989)

- Modeling
- Scaffolding
- Coaching
- Exploration
- Articulation
- Reflection

Cognitive Apprenticeship Steps

J. S. Brown, A. Collins, P. Duguid

- **Modeling**

- in cognitive apprenticeship means showing how a process unfolds and giving reasons why it happens that way

- **Scaffolding**

- is a kind of cooperative problem-solving effort by teachers and students in which the express intention is for the students to assume as **much of the task on his own** as possible

Cognitive Apprenticeship Steps

J. S. Brown, A. Collins, P. Duguid

- **Coaching**
 - Basically, coaching is giving the learner any type of assistance necessary to complete a task. Coaching includes scaffolding
 - **not practicable in case of hundred students!**
- **Exploration**
 - in this field is pushing students to try out their hypotheses methods, and strategies with the similar processes that experts do to solve problems.

Cognitive Apprenticeship Steps

J. S. Brown, A. Collins, P. Duguid

- **Articulation**
 - Through articulation, the learner expresses his/her learning so that classmates have a basis of information to refine and extend their understanding.
 - **not practicable in case of hundred students!**

Cognitive Apprenticeship Steps

J. S. Brown, A. Collins, P. Duguid

- Reflection
 - is a time for a student to analyze what they have learned and how it can be improved upon.
 - Time for Online-Testing!

4C/ID Four Components Instructional Design

van Merriënboer (1997) and others

- Learning Tasks
- Supportive Information
- Procedural Information (Just-in-time-Information)
- Part-Task Practice

4C/ID Four Components Instructional Design

van Merriënboer (1997) and others

- **Learning Tasks**

- The tasks are sequentially ordered according to task difficulty and are to be performed by learners in simulated or real task environments.

- **Supportive Information**

- supports the learning and performance of non-recurrent aspects of learning tasks; includes cognitive strategies and cognitive feedback, is always available to the learners
- Task complexity increases as the learner progresses, but with each level of complexity comes additional supportive information from the instructional environment

- **Procedural Information (Just-in-time-Information)**

- **Part-Task Practice**

4C/ID Four Components Instructional Design

van Merriënboer (1997) and others

- Learning Tasks
- Supportive Information
- Procedural Information (Just-in-time-Information)
 - prerequisite to the learning and performance of recurrent aspects of learning tasks or practice items, consists of information displays, demonstrations and instances and corrective feedback
- Part-Task Practice
 - provides additional practice for selected recurrent constituent skill in order to reach required level of automaticity
 - **Not possible for the large number of novices!**

Cognitive Load Theory

J.Sweller 1988, P.Chandler & J.Sweller 1991

- Focuses on how constraints on the human **working memory** help determine what **kinds of instruction are effective**.
- It describes **learning structures** in terms of an **information processing system** involving the **long-term memory**, which effectively stores all of our knowledge and skills on a more-or-less permanent basis and the **working memory**, which performs the intellectual tasks associated with consciousness.
- Information may only be stored in the **long-term memory** after first being **attended to**, and **processed by the working memory**.

Cognitive Load Theory

- Short-term Memory → Working memory
 - Human working memory is limited; we can only keep in mind a few things at a time. This poses a fundamental constraint on human performance and learning capacity.
 - Two mechanisms to circumvent the limits of working memory are
 - schema acquisition, which allows us to chunk information into meaningful units, and
 - automation of procedural knowledge.” (Wilson & Cole, 1996)
- Long-term Memory
- Intrinsic Load
- Germane Load
- Extraneous Load

Cognitive Load Theory

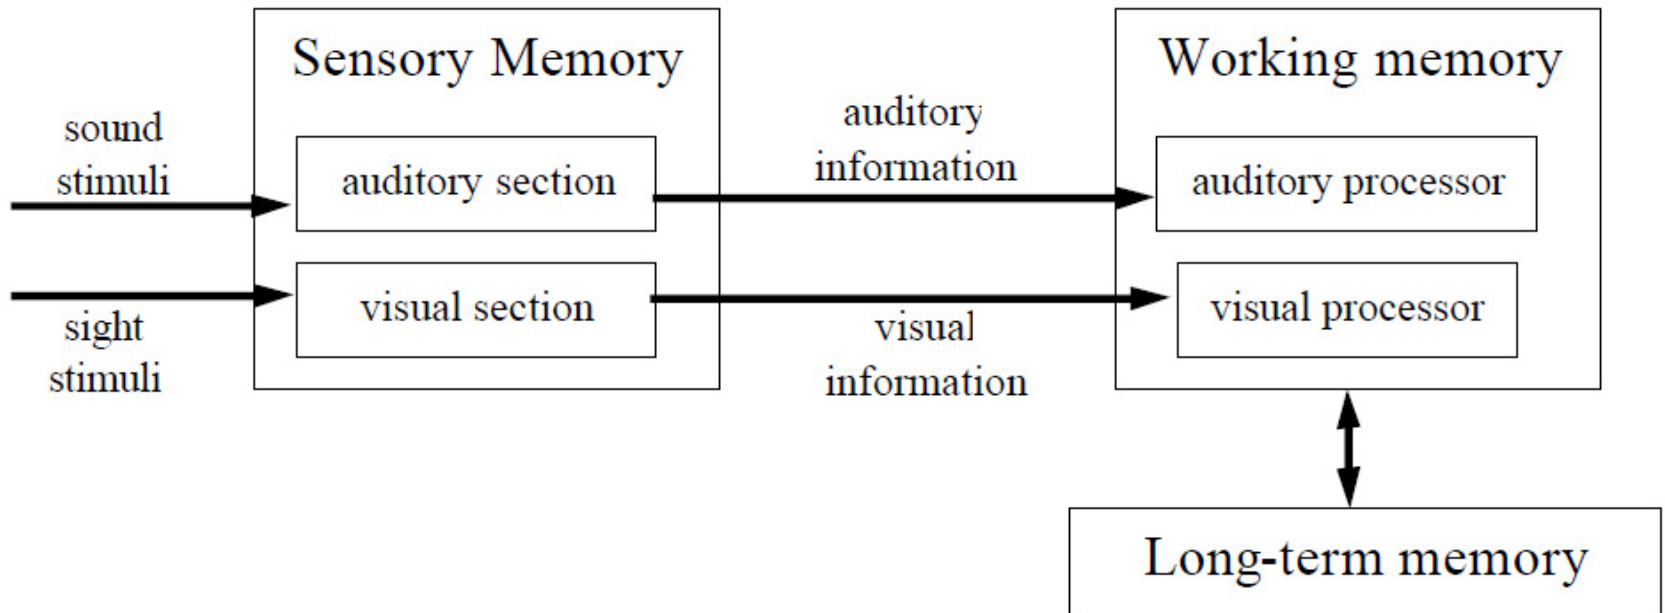

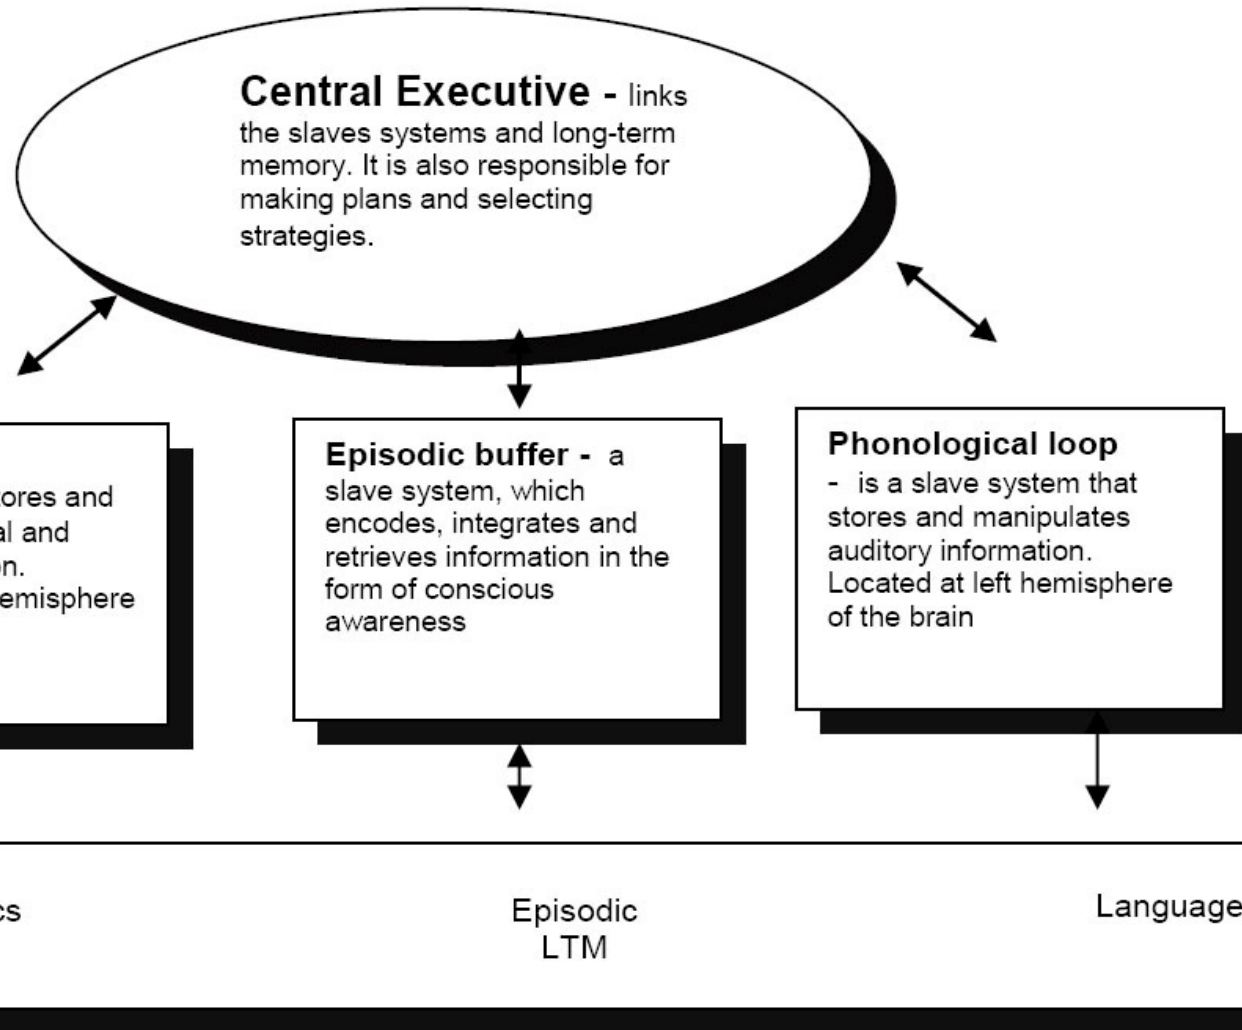

Figure 1 A Simple Model of Memory

CLT Working Memory

The working memory model (Baddeley's, 2000)

Cognitive Load Theory

- **Intrinsic load**
 - refers to the **complexity** of the learning material. It is dependent on the **intrinsic nature (difficulty level)** of the learning material and also on the learner's amount of **prior knowledge**.
- **Germane load**
 - refers to demands placed on the **working memory** that are imposed by mental activities that contribute directly to learning.
 - **Also called relevant load!**
- **Extraneous load**
 - refers to **mental activities** during learning that **do not contribute** directly to learning.
 - **Also called irrelevant load!**

Resume

- For greenhorns, the most effective learning will result from the concise informal narration of relevant graphics.
- In situations that rely on visual elements only the most effective learning will result from the concise informal textual explanation of relevant graphics in which the text and graphic are integrated on the screen.

Resume

- Apply the research and psychology behind the core principles of the CLT: the extraneous, intrinsic, and germane types of the cognitive load
- Eliminate common sources of the extraneous cognitive load through the best use of graphics, text and audio materials
- Manage the intrinsic cognitive load by weeding and “chunking”

Questions to ask

- The most important question should be...

Why?

Questions to ask

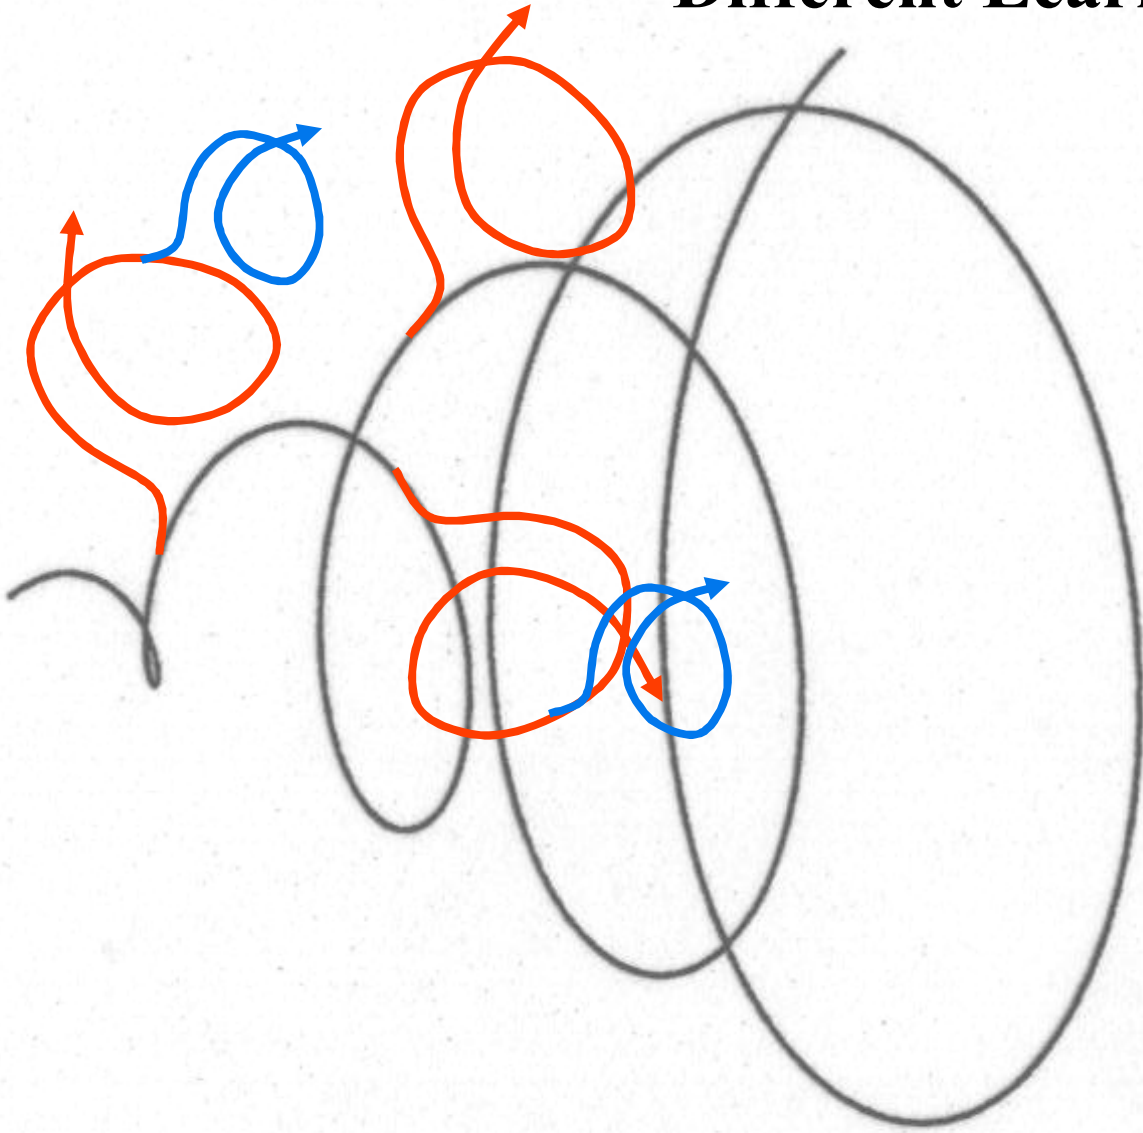

- **Surface features** (Skin [**proteines**, **proteines+cellulose+cork**])
- **Ingestion and egestion of substances** (**nutrient** / **Excrement** / **deciduous leaves**, anatomical airway [**oxygen** / **carbondioxide**], mineral supplements , **stomata** [**carbondioxide** / **oxygen**])
- **Possibilities for the transfer of substances** (vessels [**bloodvessels, trachea** / **trachea, sieve cells**])
- **Storage for nutrients** (**fat cells** / **oil cells**, **liver/glycogen** / **parenchyma/ amyllum**)
- **Sexuell reproduction** (**spermatozoon** / **oocyte** → **embryo** → **nestling**, Spermakern/Eizelle → Embryo → Same)
- **Construction manual** (DNA → nucleus and organelles [**mitochondria**, **mitochondria** / **chloroplast**])

Questions to ask

- Main suggestion
 - Conceive you are a mushroom/tree/ape/...
 - What will happen to you during
 - Day/night
 - stormy weather
 - Sommertime/wintertime
 -
 - Which biological needs appear?

Lessons learned

- + Adequate tool for large audiences
- + Online tests are highly efficient
(depending on workload invested beforehand)
- + Guiding structure vs. Google chaos
- Digital divide! (Solution: PC for rent or large PC-rooms)
- Differences in IT equipment of students problematic
- Broadband infrastructure needed
- Didactic attractive tools need technically advanced equipment
- Unclear setting of online examinations
(tutors, friends, etc.)
- **Virtuality vs. reality (look and feel)**

Thank you for attention
